INFORMATION

HOW IT WORKS

1

Choose A Panel Size

Choose from 3 pre-made stock size options, or specify your own bespoke panel size.

2

Confirm The Quantity

You can have any quantity of panels you desire.

3

Confirm The Configuration

Configure the panels in any manner that suits your preference and we will adjust the image accordingly.

4

Select Your Images

Choose an image from our library below, or provide us with any high resolution photograph. If you decide to provide us with an image, We ask for a minimum of 300 DPI for the entire panel size. See more information on Page 5

5

Choose A Mounting Method

Suspended ceiling grid options include lay-in, surface mount, or cable suspension.

6

Confirm The Configuration

You can choose a simple on/off control option or something that offers greater flexibility and impact. We offer enhanced control options that can dramatically increase energy and environmental savings. Speak to one of the team to discuss control options.

WHAT

SIZE

We provide LED sky panels in three standard sizes.

Additionally, we have the capability to design and manufacture bespoke panel sizes to suit any application. Speak to one of our team to discuss bespoke size options.

600mm x 600mm

600mm x 1200mm

1200mm x 1200mm

SELECT
YOUR IMAGES

Select an image that will strike a chord.

We have an image library or if you would like to choose a custom image (image licance fees may apply).

*We assess each project on an individual basis to ensure a high-resolution finish can be achieved prior to manufacture – Feel free to share the images you are considering using and the planned panel size and we can assess this for you. We ask for a minimum of 300 DPI at the overall size of the panel or, range of panels if the image is to span across multiple. For example: If you require 4 LED 1200x600mm panels in a row we would require a DPI of 300 at 1200x2400mm (same goes for ceiling panels).

2x2 Diamond Layout

THE PROCESS: STEP 3

ENVISION
YOUR SETUP

When selecting an image, think about how it will be viewed once installed. A ceiling-mounted panel should feature an image that mimics the perspective of looking up, creating a convincing skylight effect.

A wall-mounted panel works best with an image that appears as if it's being viewed straight on, resembling a traditional window. Choosing the right perspective ensures the most realistic and immersive result. See the examples above for guidance!

THE PROCESS: STEP 4

VERIFY AMOUNT

You have the freedom to choose the panel arrangement configuration and quantity to meet your needs and preferences.

We can fulfill any specific or custom requirements you have in mind.

THE PROCESS: STEP 5

VALIDATE
SETUP

Arrange the images in any manner that suits your preference.

We will make the necessary adjustments to the image to accommodate your chosen arrangement.

OUR CAPABILITY

Regardless of how intricate your layout may be, we possess the complete capability to perfectly align your image within it.
